

I am urging you to not implement the proposed BPL data delivery system. I have listened to the rf interference that this system causes to the amateur radio frequencies and I'm convinced it will mean the end of amateur radio operations on these bands (1.8 thru 28 mhz). Amateur radio provides enormous value as an emergency communication system, something that may prove even more value in the coming years of terrorism threats than it has in the past. The amateur radio community is huge and it seems that ignoring the impact of this data delivery system to such a large group of people is infringing on our rights. Additionally, this system will be disruptive of other emergency communications systems unrelated to amateur radio. I plan to do everything in my power to keep this system from being deployed beyond its current test phase. Regards, Gary Slagel
